

Environmental Policy

Our Promise to You and to the Environment

We Recycle Your Items Responsibly

Each and every item we receive is carefully inspected to determine if it can be reused or recycled.

Printer Cartridges

Empty ink and toner cartridges undergo a stringent six-point inspection to determine whether they can be reused. Reusable printer cartridges are then shipped to accredited remanufacturers and eventually returned to the marketplace. Your store-brand printer cartridge may have started its second life at FundingFactory! Damaged cartridges are sent to a licensed, state-of-the-art facility to generate electricity and steam, which is then sold as renewable energy.

Cell Phones

Remanufacturable units are refurbished and reused. Units beyond repair are sent to certified end-of-life vendors to recover precious metals, which are sold for use in new products. In accordance with U.S. Department of Defense regulations, all memory is erased from any electronic marked for reuse; memory in recycled items is destroyed during the smelting process.

Rigorous Eco-standards

R2 (Responsible Recycling) Certification

R2 certification is the leading standard for the electronics recycling industry and recognizes companies that protect the environment, human health, safety, and the security of the recycling process. R2 certification is awarded only to facilities meeting rigorous standards for environmental responsibility, as tested by third-party auditors. In all, the audit encompasses more than 50 areas of operational and environmental performance, and ensures that companies manage not only the responsible recycling of materials in their own facility, but also in those further downstream in the recycling process.

ISO 14001:2004 Environmental Certification

ISO 14001:2004, is the international specification for an environmental management system (EMS). It establishes regulations for creating, measuring, reviewing, and improving environmental policies, products, services, and business operations.
